

Inspekly Feature Specification

A concise reference for product evaluation and project scoping.

Work order management

- Photo-based work request creation
- Assignment, priority and status tracking
- Automated routing and overdue reminders
- Central work-order history

Preventive maintenance

- Recurring routines and flexible schedules
- Bundled assets within maintenance plans
- Push notifications for assigned work
- Live progress monitoring

Asset and location data

- QR asset tags and issue reporting
- Asset manuals and repair records
- Location, floor and group organisation
- Digital Twin and LiDAR workflows

Mobile field operations

- iOS and Android work applications
- Timestamped logs and photo evidence
- Location-aware inspection records
- QR login for teams and vendors

Reporting and governance

- Web dashboard for remote oversight
- PDF and Excel report export
- Role-based user and vendor access
- Structured audit records

Extended reality options

- AR preventive maintenance guidance
- AR defect capture and asset tags
- Spatial work-order navigation
- 3D Editor and room scanning

Deployment notes

Licensing, onboarding, room scanning, 3D mapping, integrations and XR setup depend on the number of sites, users, assets and required workflows. Confirm scope and commercial terms with the sales team.
