

Inspekly Product Overview

Mobile CMMS, EAM, Digital Twin and XR workflows for facility operations.

What Inspekly does

Inspekly brings inspections, work orders, preventive maintenance, asset records and field evidence into one mobile-first operating system. Teams can capture issues where work happens, route tasks, monitor progress remotely and maintain a consistent digital record for reporting and audits.

Core operational value

- Replace paper forms with digital workflows.
- Create work orders from photos or QR tags.
- Schedule recurring preventive maintenance routines.
- Track field activity with time and location data.
- Centralise asset histories, manuals and evidence.
- Use Digital Twin and XR for spatial guidance.

Suitable operating environments

Property and facility management, manufacturing, hospitality, healthcare, retail, energy and utilities, fleet operations, recreation facilities and multi-site service teams.

Published customer evidence

International Commerce Centre (ICC), managed by Kai Shing Management Services, has used BIM, Inspekly Digital Twin and AR maintenance technologies within its wider operations and energy programme. Published reporting states that ICC reduced annual electricity consumption by more than 20 million kWh compared with 2012, equivalent to 14,000 tonnes of carbon emissions, and received the Hong Kong Awards for Environmental Excellence Gold Award twice. These programme-wide outcomes should not be attributed solely to Inspekly.
